

Physician Administered (J-Code) for Long Acting Injectable Anti-Psychotic Medication Billing

Currently the long acting injectable anti-psychotics risperidone microspheres (Risperdal® Consta®), paliperidone palmitate (Invega® Sustenna®), aripiprazole (Abilify® Maintena®) and olanzapine (Zyprexa® Relprevv™) will be covered under the formulary rules of the Medicaid Managed Care programs for most consumers. A physician may administer and bill for these physician administered (J-Code) drugs on a fee-for-service basis **only when administered to Supplemental Security Income (SSI) and SSI-related enrollees in mainstream Medicaid Managed Care plans**. If the consumer is enrolled in a managed care program, the physician will need to determine if the consumer is a SSI enrollee. The billing will continue to use the following J-codes:

- Risperidone microspheres – J2794
- Paliperidone palmitate – J2426
- Olanzapine – J2358
- Aripiprazole – J0401
